

Gryd's Azure to GCP Migration

Partner aligned early with Google and provided Google Cloud expertise to help client migrate from Azure to Google Cloud.

The challenge

Gryd was facing high database costs with their Azure SQL Managed Instance and wanted to move to a more cloud native and higher performing database solution on Google Cloud to save money. Gryd wanted to migrate off of Azure quickly and contacted Google who engaged Google Cloud Migration experts Intelagen to help with the rapid migration.

The solution

Intelagen implemented a secure Google Cloud foundation and enabled CloudSQL, GKE, Compute Engine, and Cloud Storage. Due to the complexity of the Azure SQL Managed Instance, Intelagen had to leverage Databricks in the migration approach to help ensure there was no disruption to the production application and website.

The result

Client significantly reduced their operational costs associated with the database by moving to CloudSQL on Google Cloud.

“ Intelagen proved to be an invaluable partner in migrating our application to Google Cloud. Their flexibility and adaptability were truly impressive, especially when our priorities shifted at the start of the process. Their agility, combined with their deep cloud expertise, was crucial to our successful transition and has set us up for continued success in the future. ”

Josh Glow, President & Co-Founder, Gryd

About Gryd

Gryd is a leading PropTech company transforming real estate with cutting-edge marketing and parking solutions. Their mission is to deliver smart, user-friendly solutions that empower property owners, managers, and tenants. Their vision is to transform the real estate industry with technology that streamlines and enhances property management.

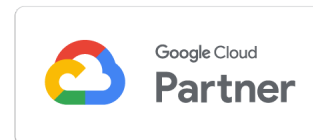

Vertical/horizontal solution: Other

Primary project location: United States

About Intelagen

Intelagen is a distinguished Google Cloud partner specializing in the transformative power of AI, Data Analytics, and Web3.
